A gigabit passive optical network (G-PON) comprises optical line terminals (OLTs) and optical network units (ONUs), and Murata's lineup of products for use in OLTs is introduced here.

Cortina family of Optical Line Terminal (OLT) SoCs completes the end-to-end solutions for EPON and 10G-EPON applications. Our silicon devices have been interoperability-tested, field-proven and

An Optical Line Terminal (OLT) is the central device in a Passive Optical Network (PON) that connects the service provider's core network to end users through fiber optic cables.

The Tellabs FlexSym OLT1 provides industry leading fiber route diversity and geographically dispersed OLTs with FSAN-based Type-B PON Protection support to maximize network availability and uptime

At the heart of a point-to-multi-point or passive optical network (PON) is the optical line terminal (OLT). Modern OLTs offer communication service providers (CSP) the ability to launch multigigabit services

Our Optical Line Terminal (OLT) is the central controller of any Passive Optical Network--efficiently managing data, voice, and video across multiple ONUs/ONTs. Built for speed, reliability, and growth,

Explore our range of high-quality GPON, EPON, and XG (S)PON OLT products. Find the perfect Optical Line Terminal solutions for your network needs.

An optical line termination (OLT), also called an optical line terminal, is a device which serves as the service provider endpoint of a passive optical network.

An optical line termination (OLT), also called an optical line terminal, is a device which serves as the service provider endpoint of a passive optical network. It provides two main functions: 1. to perform conversion between the electrical signals used by the service provider's equipment and the fiber optic signals used by the passive optical network.
